

48 HOURS TO REVIVE DORMANT PATENTS

STEP 1

1 UNDERSTAND THE ENVIRONMENT : PESTEL ANALYSIS

What are the impactful events, decisions or trends corresponding to the following dimensions?

DOMAIN

SBA
(Strategic Business Area)

POLITICAL
(ex: government or institutional decisions)

ECONOMIC
(ex: economical trends)

SOCIAL
(ex: demographical factors)

TECHNOLOGICAL
(ex: innovations and locks)

ENVIRONMENTAL
(ex: waste, energy)

LEGAL
(ex: applicable legislation)

2 OLAP

Here you can do the synthesis of your opportunity and context analysis.
Reflect on each quadrant for 3 minutes individually and then share with all the team

Please write down your reinterpretation or the reframing of the main opportunity proposed in this workshop?

OPPORTUNITY

Please write down the key lessons and takeaways from the PESTEL analysis and the keynote.

LESSONS LEARNED

Please write down the main remaining questions.

ADDITIONAL QUESTIONS

Please write down the main problem areas that you identified and you would like to address.

PROBLEM

48 HOURS TO REVIVE DORMANT PATENTS

STEP 2

1

RESEARCH CONCEPTUALIZATION

GENERAL TOPIC TO FOCUS
(ex: Thermal water composition)

WHAT? What aspects interest me? What are the components of the question?

WHO? Which particular groups are concerned ? Which ones interest me?

WHEN? What period are we talking about? Is it a specific era? Can it be circumscribed in time? What period am I more interested in?

WHERE? What's the geographical context? Can we limit it to a particular region? Country?

HOW? What approaches or points of view should be considered? Historical? Sociological? Economic? Statistical? Legal? Scientific? Ethical ?

WHY? What is the significance or importance of the subject? What are its implications? Why should we care?

POSSIBLE FOCUS QUESTIONS
What questions would you like me to answer?

48 HOURS TO REVIVE DORMANT PATENTS

STEP 2

2

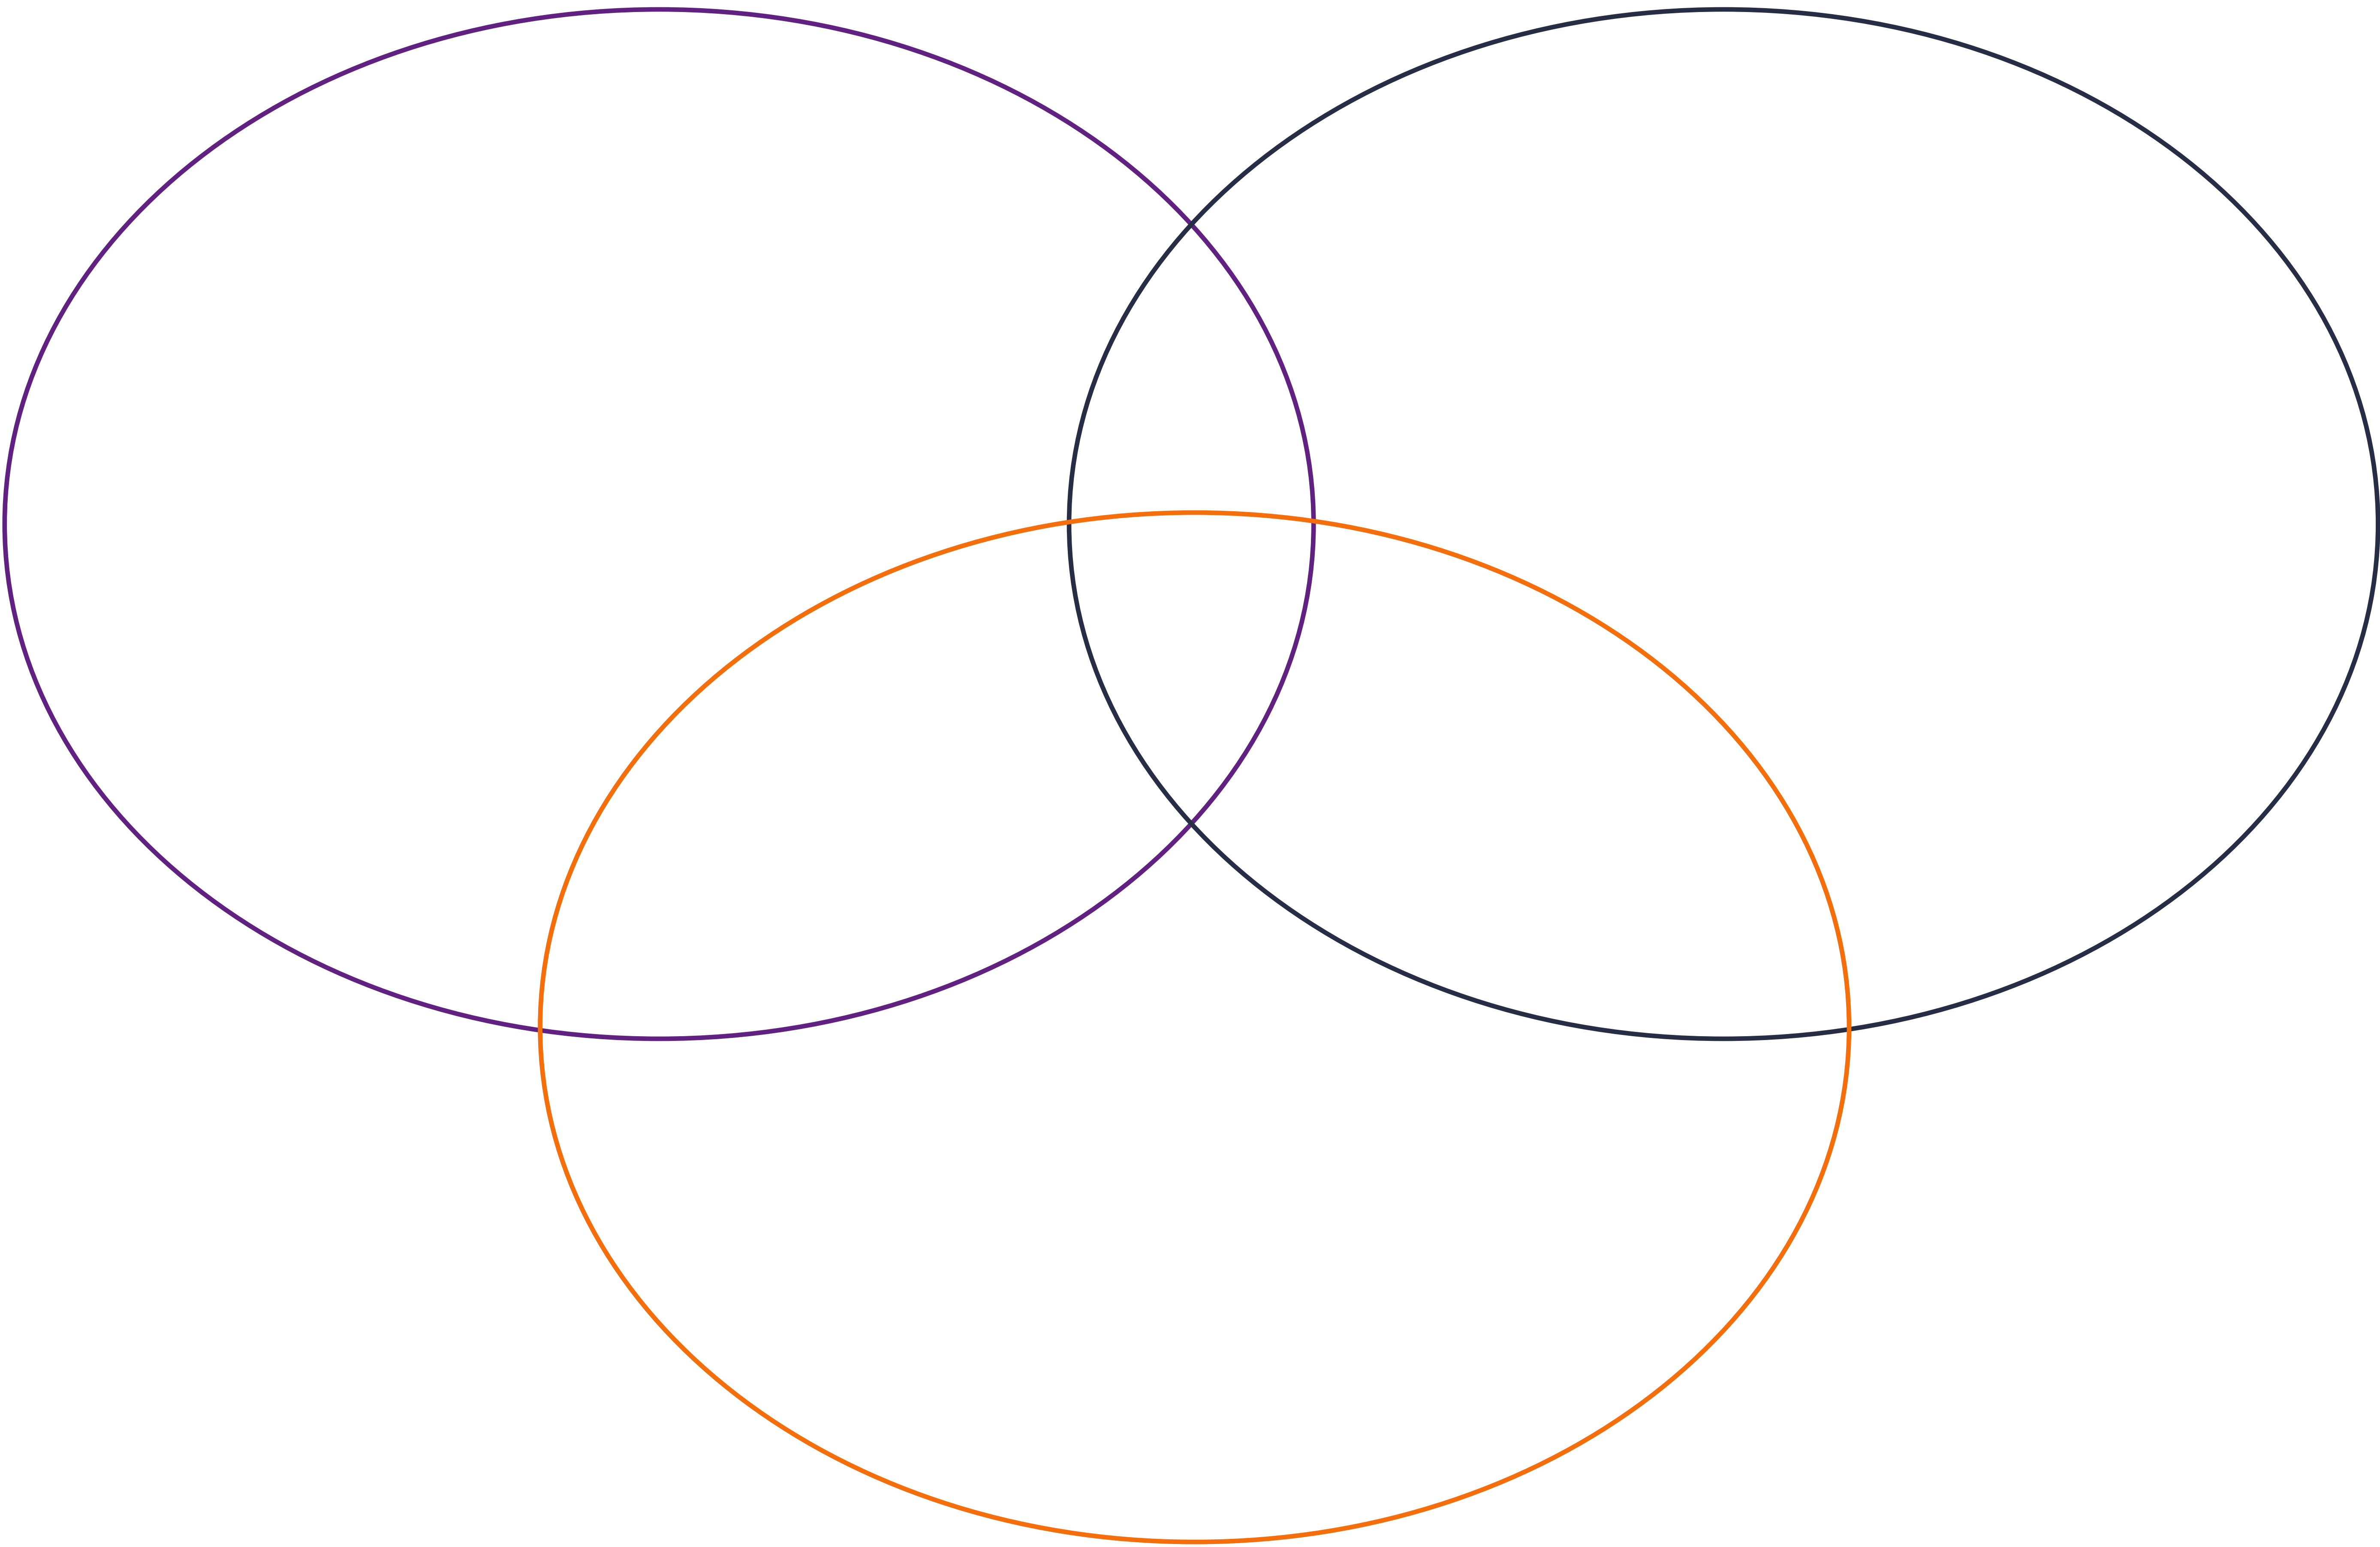

PATENT SCREENING AND ANALYSIS

Based on the last phase of «OLAP», and using the scientific and patent databases, the main goal is to identify a problem statement and structure it as a research equation. To do so, you need to select a subject of work, and then identify the three of 4 concept associated. After, you will define the main keywords to better represent the selected concepts.

PROBLEM STATEMENT :

CONCEPT : _____

CONCEPT : _____

CONCEPT : _____

SEARCH EQUATION

TIPS FOR THE SEARCH IN WoS:

Use Wildcards:

- Use an asterisk * to represent any number of letters at the end of a word.
- Phrase searching: Use quotation marks to force a search for a phrase.
- Use the boolean operators AND / OR.
- Take a look on the " Advanced Search Query Builder" of Web Of Science.

48 HOURS TO REVIVE DORMANT PATENTS

STEP 2

3 EXPLAINING THE PATENT DOMAINS

Insert the Network Visualisation from the VosViewer Software based on the retrieved scientific patent.

IDENTIFIY AND MAKE A DESCRIPTION OF THE CLUSTERS IDENTIFIED

CLUSTER	PRINCIPAL KEYWORD	ASSOCIATED KEYWORDS

COMPANIES THAT DEVELOPPED THE PATENT.

Insert the treemap chart of the companies that hold the rights of the patents.

From these elements of the scientific and patent domains,

- Can you identify issues and prospects for research / or development (i.e. are there any underdeveloped aspects/themes that deserve further study?)
- Do you identify already commercial products developed by the companies holding the patent rights?

4 NEW PATENT OPPORTUNITIES

Select at least 5 potential patents opportunities that you have retrieved in the database. Based on their patent claims, make a short synthesis of each one of them, arguing their pertinence for the context of Nancy.

1.

2.

3.

4.

5.

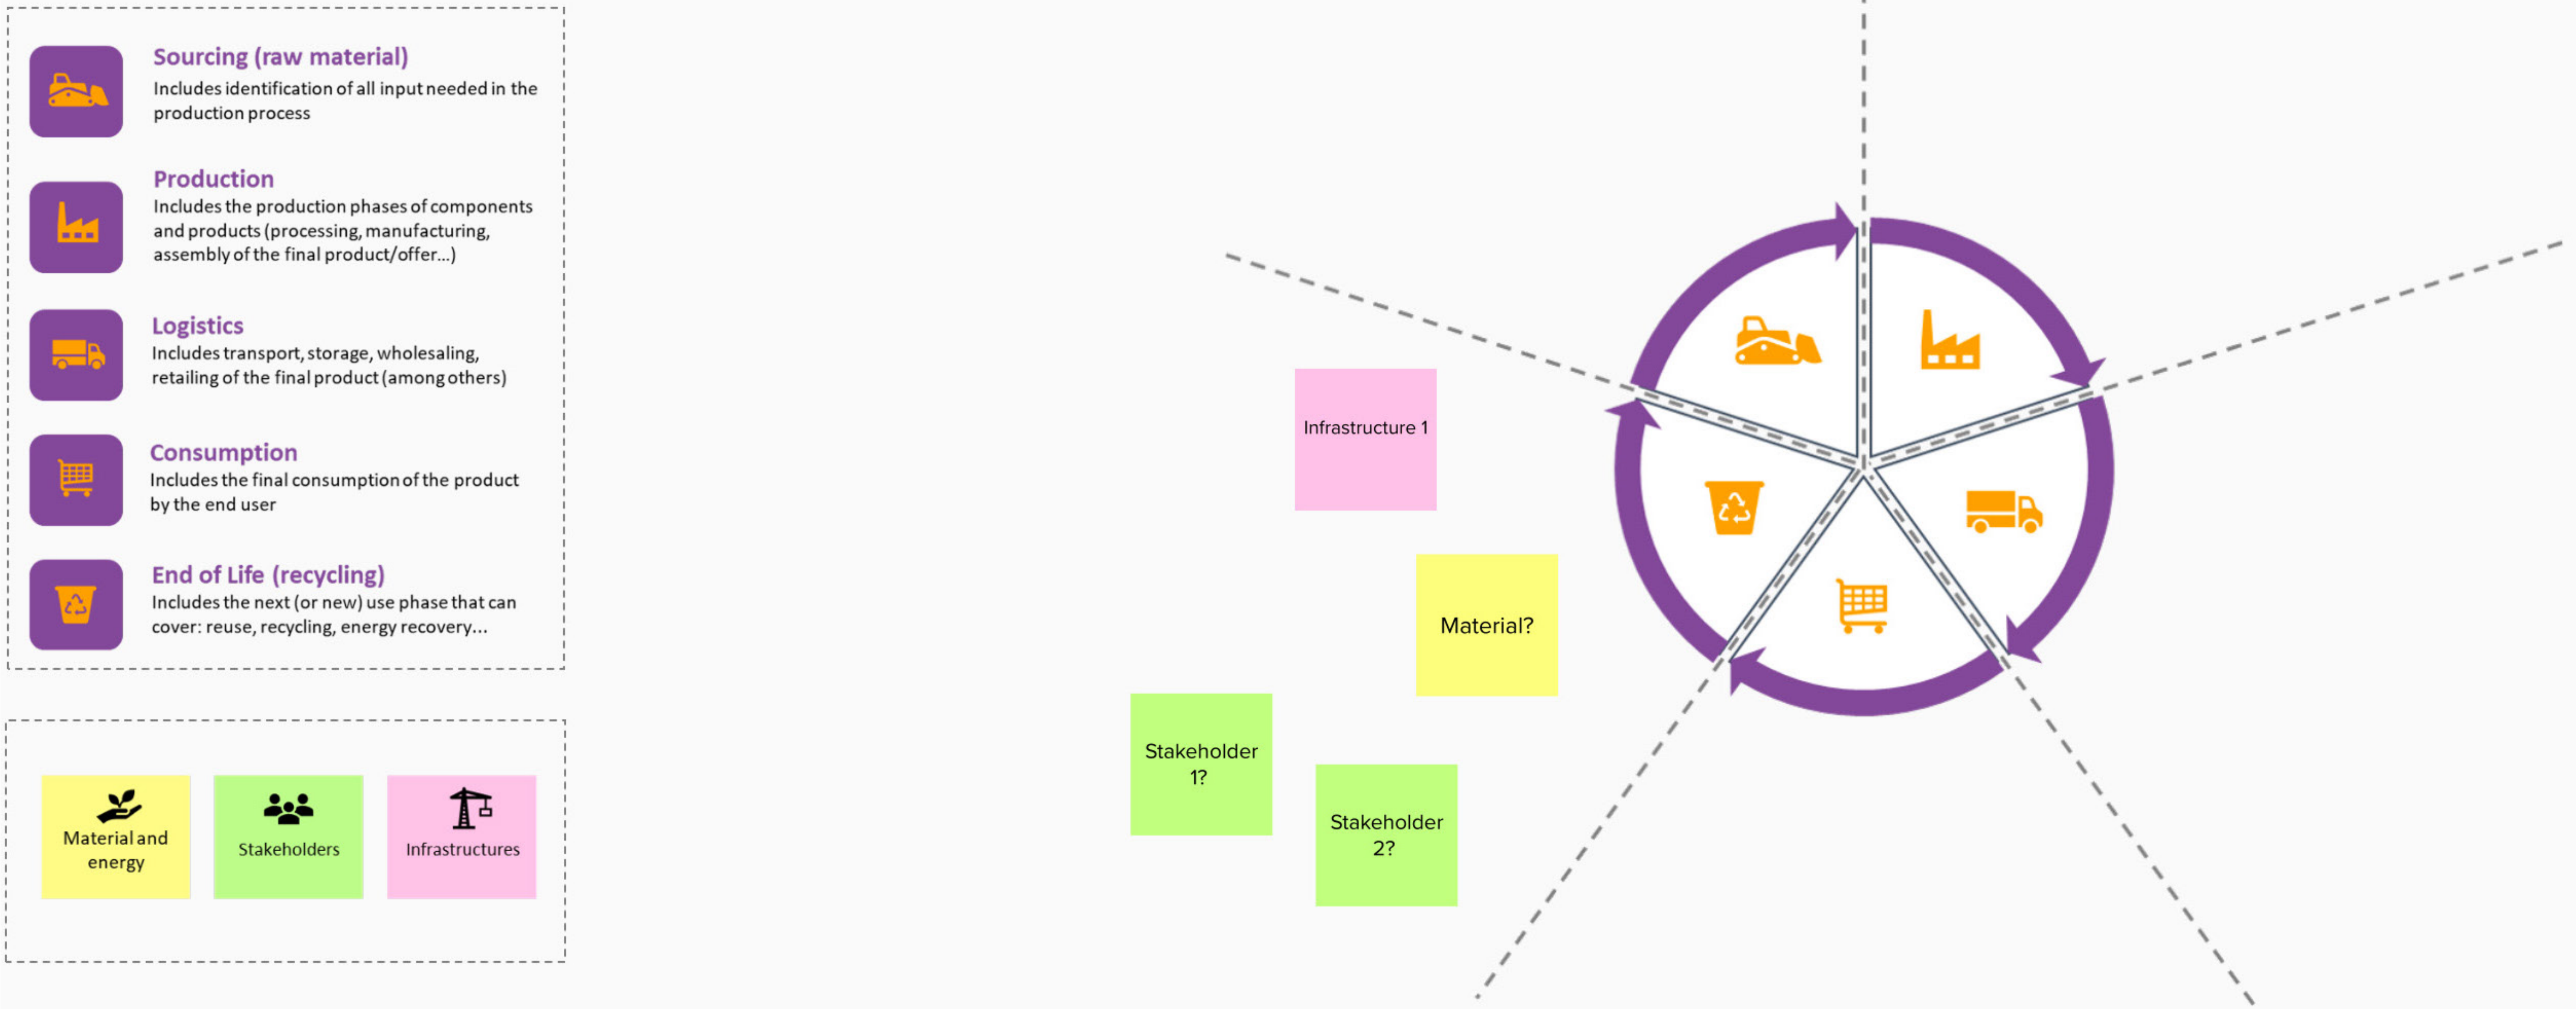

48 HOURS TO REVIVE DORMANT PATENTS

STEP 4

1

NEW SUSTAINABLE VALUE OPPORTUNITIES

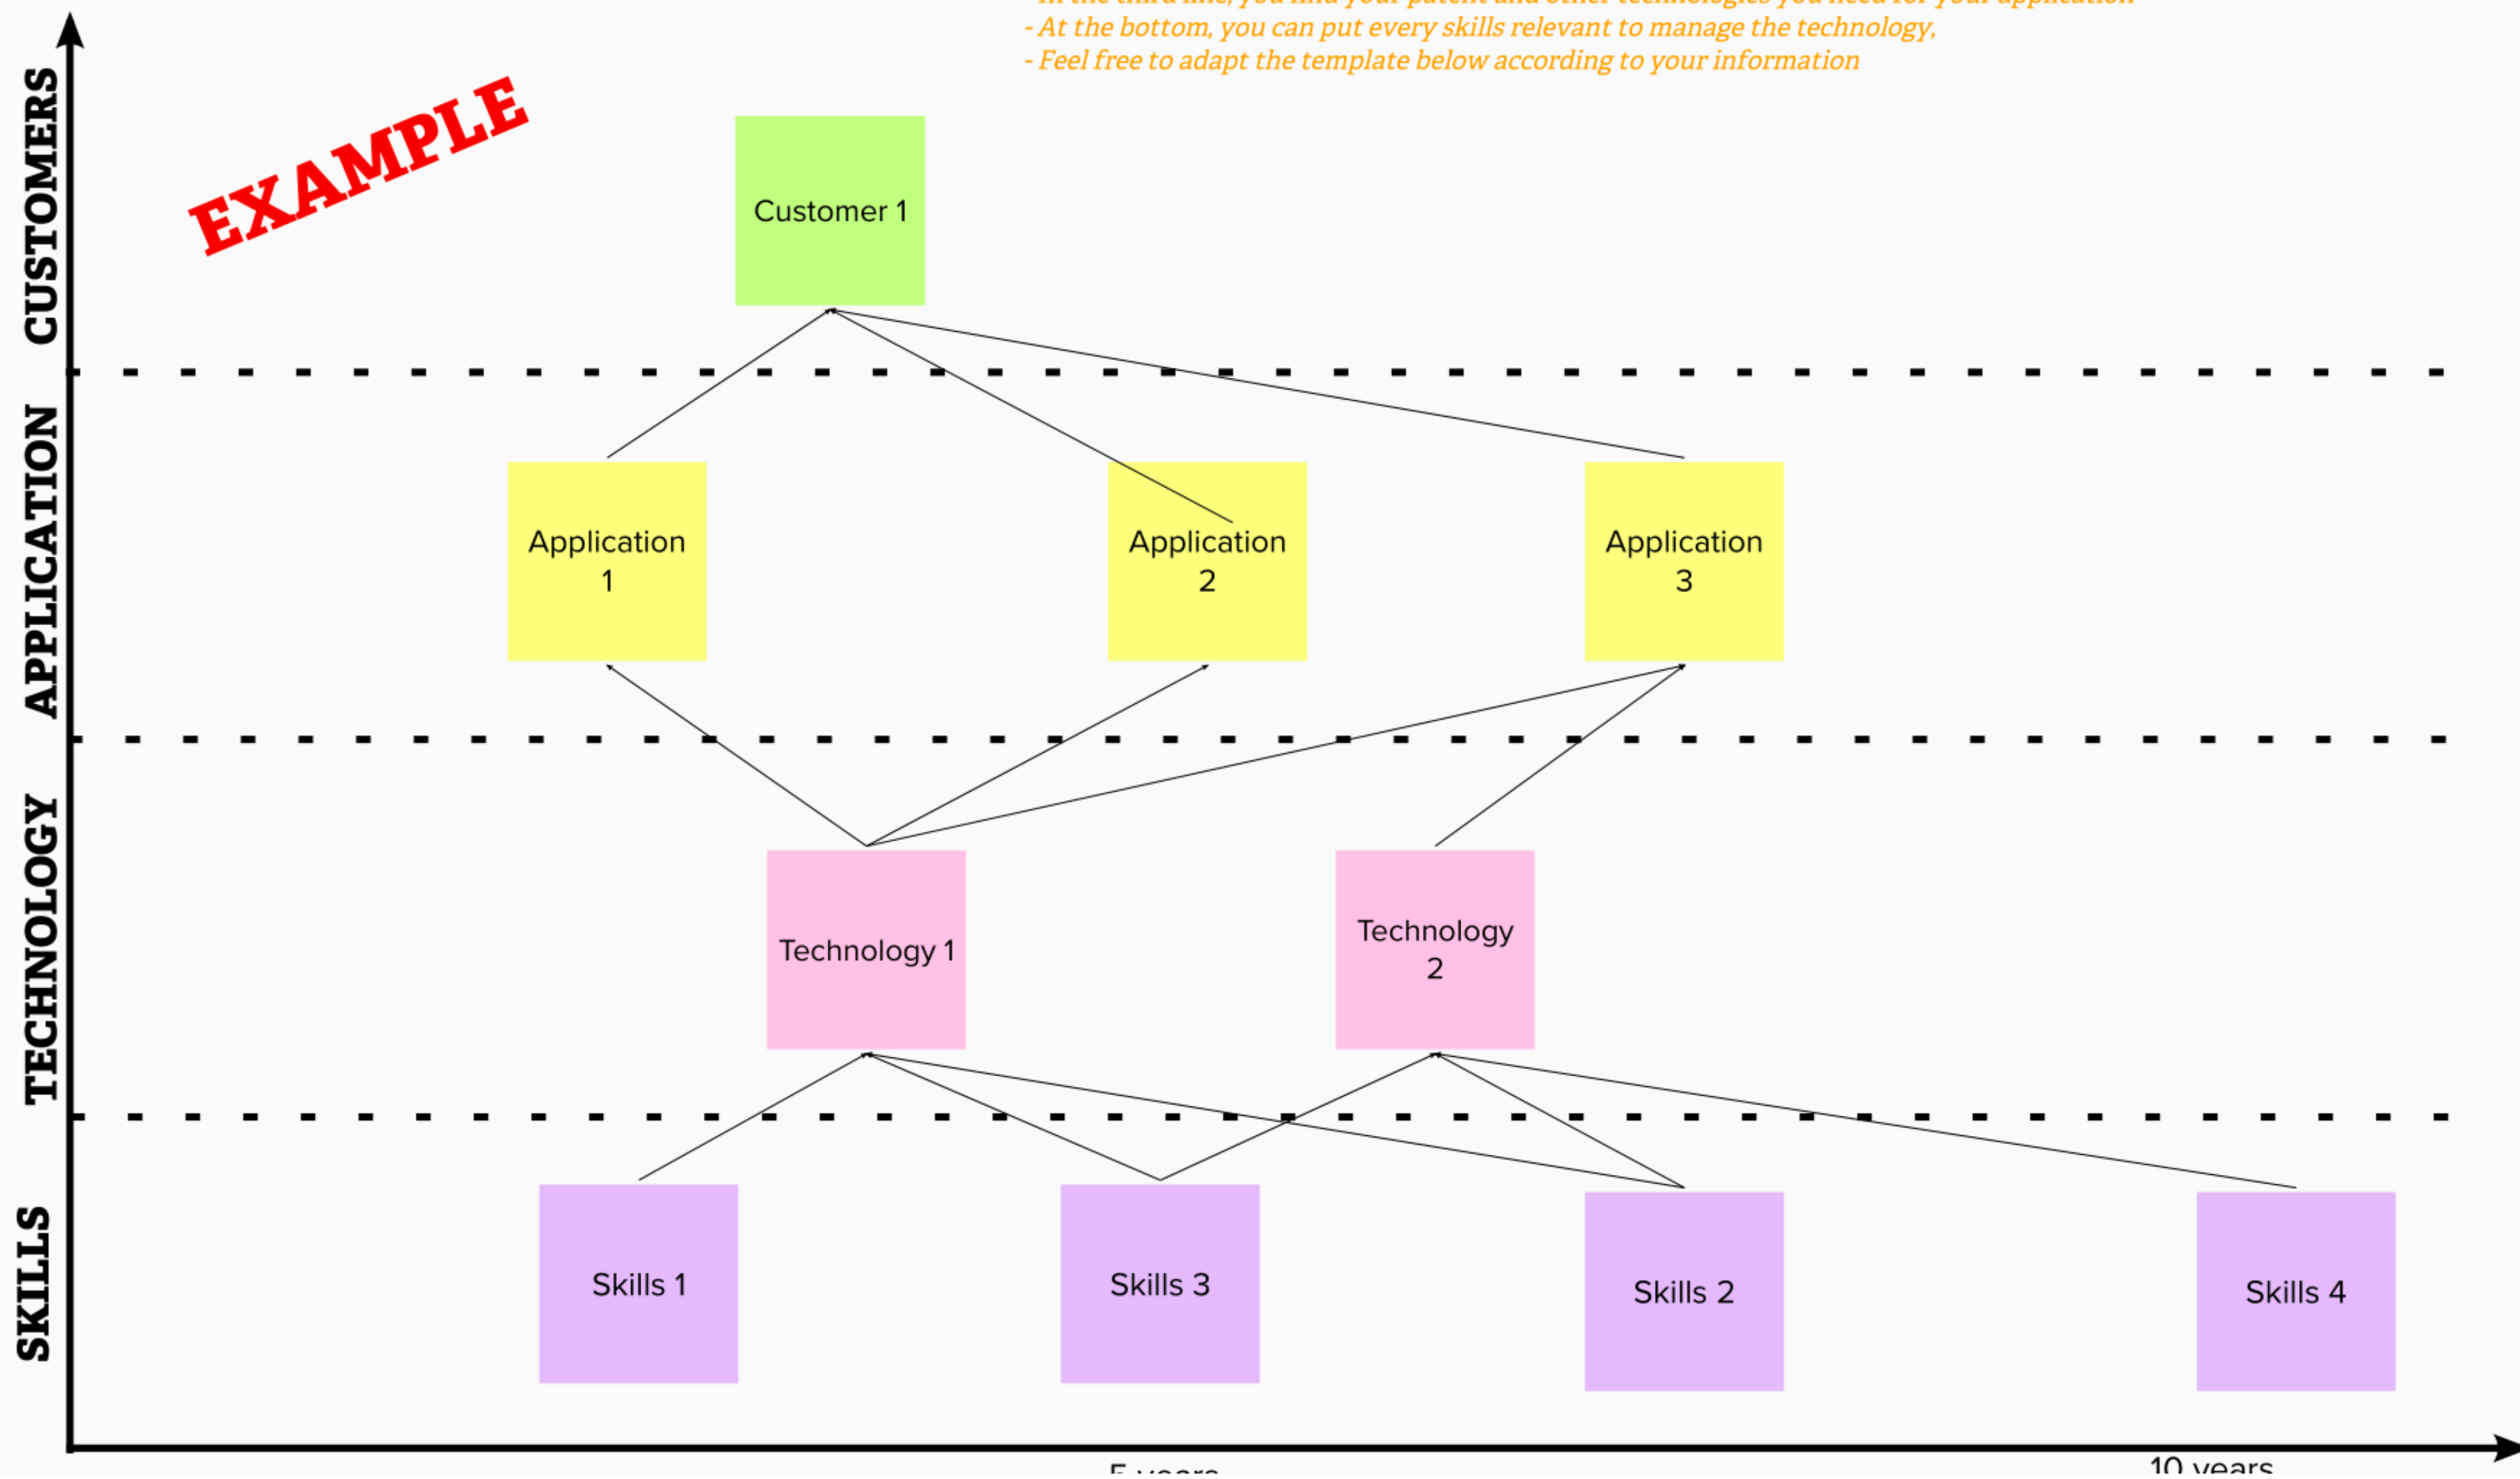

Identify the necessary materials, stakeholders and infrastructures for the implementation of your concept using the closed loop value chain template

2

ROADMAP

Indicate the name of your concept

Now, you just have to link every information found in all previous step.
Each information will follow the time scale: so you have to prioritize every things you want to integrate, learn...

- On the top, you can find the market in which you want to implement your product
- In the second line, you can find there the application you want to develop/promote
- In the third line, you find your patent and other technologies you need for your application
- At the bottom, you can put every skills relevant to manage the technology.
- Feel free to adapt the template below according to your information

Indicate on this case the important points to consider for the development of your concept (technologies, law, constraints, skills, competition...)
